Amendments to the Specification:

The specification has been amended as follows:

Please amend paragraph [0012] as follows:

[0012] It is a feature of the present invention that capturing FTS and conveying this information to corresponding locations or "places" along the cochlea can be implemented in conjunction with such concepts as K-oft M of N stimulation strategies, as well as virtual channels/electrodes.

Please amend paragraph [0078] as follows:

[0078] It is further emphasized that the present method can be used in conjunction with other stimulation concepts including use of (a) virtual electrodes and (b) $\mbox{K-oft-}\mbox{M of N}$ stimulation strategy. A $\mbox{K-oft-}\mbox{M of N}$ strategy is a stimulation strategy in which only [[K]] \mbox{M} number of channels or electrodes are stimulated in one time interval of the [[L-]] \mbox{N} total available channels or electrodes. [[K]] \mbox{M} is smaller than [[L-]] \mbox{N} , and both are whole numbers. Preferably, [[L-]] \mbox{N} is between 8 and 22 $\mbox{channels}$ or electrodes. Virtual electrodes may be used in such a $\mbox{K-oft-}\mbox{M of N}$ stimulation system, provided that at least two electrodes are concurrently stimulated, e.g., [[K]] \mbox{M} is at least 2.
